

Try It Yourself — Step by Step

Ek guest support conversation start karta hai, admin reply karta hai — aur jaan bujh kar kuch messages read, kuch unread chore jate hain, taake dono states dekhi ja sakein.

GUEST — mobile app token

ADMIN — admin portal token

▶ = ye step jaan bujh kar "unread" chorne ke liye hai

1

GUEST Conversation start karo — pehla message bhejo

POST /api/v1/support-chat/my/messages

```
{ "body": "Mera QR code entrance pe scan nahi ho raha" }
```

Ye call conversation khud bana degi — alag se "create conversation" karne ki zaroorat nahi.

2

GUEST Check karo conversation ban gayi

GET /api/v1/support-chat/my/conversations

Dekho: status: "Open", unreadCount: 0 (kyun ke admin ne abhi tak reply nahi kiya).

3

ADMIN Inbox check karo — kaun unread hai

GET /api/v1/support-chat/conversations?onlyUnread=true

Guest ka naam is list mein dikhega, unreadCount: 1. **List se id field copy kar lo — yehi "conversationId" hai**, agle sab admin steps mein use hoga.

4

ADMIN Us guest ki पूरी chat kholo

GET /api/v1/support-chat/conversations/{conversationId}/messages

Guest ka message dikhega — fromGuest: true, isRead: false.

5

ADMIN Reply karo

POST /api/v1/support-chat/conversations/{conversationId}/messages

```
{ "body": "Aap apni booking ID bhej dein, hum check karte hain" }
```

6

ADMIN Guest ke message ko read mark karo

POST /api/v1/support-chat/conversations/{conversationId}/read

Ab admin ki taraf se ye conversation "read" ho gayi — inbox mein unread badge hat jayega.

7

GUEST Apne messages dekho

GET /api/v1/support-chat/my/messages

Admin ka reply dikhega — fromGuest: false, isRead: false (guest ne abhi read mark nahi kiya).

8

GUEST Admin ka reply read mark karo

POST /api/v1/support-chat/my/messages/read

Ye message ab permanently "read" ho gaya. (Ye pehla reply hai — ise read chorenge, dusre reply ko nahi — neeche dekho.)

9

GUEST Dusra message bhejo (booking ID)

POST /api/v1/support-chat/my/messages

```
{ "body": "Booking ID: GMS-2026-00458" }
```

10

ADMIN Inbox dobara check karo

GET /api/v1/support-chat/conversations?onlyUnread=true

Guest phir dikhega, unreadCount: 1 (naya message).

11

ADMIN Seedha reply karo — "read" call mat karo

POST /api/v1/support-chat/conversations/{conversationId}/messages

```
{ "body": "Shukriya, verify karke aapko batate hain" }
```

▶ Step 6 wala "read" endpoint yahan mat call karo

Reply karne se guest ka booking-ID wala message **khud-ba-khud read nahi hota** — jab tak admin khud /read call na kare. Yani ye message unread hi reh jayega admin ki side se.

12

GUEST Naya reply dekho — read mat karo

GET /api/v1/support-chat/my/messages

▶ /support/messages/read ko is dafa call mat karo

Admin ka dusra reply dikhega, isRead: false — jaan bujh kar unread chora hua.

Final state — dono taraf 1-1 unread

- **GUEST** side: admin ka 2nd reply ("Shukriya, verify...") — **unread**
- **ADMIN** side: guest ka 2nd message ("Booking ID...") — **unread**

- Pehla message-reply pair (steps 1, 5) — dono taraf se **read**
